PROFILE

Senior Backend Engineer with **6+ years** building distributed, event-driven Python systems across AWS and Azure. Leads backend architecture and modernization for a secure Saudi government platform, with hands-on ownership of APIs, asynchronous processing and production reliability. Builds GenAI applications using RAG, LangGraph and controlled tool calling, with Kubernetes deployment experience across backend and AI workloads.

SKILLS

Languages & Backend: Python, SQL, Django, Django REST Framework, FastAPI, Flask, REST APIs, SOAP, WebSockets, GraphQL, Node.js, Express.js

GenAI & Retrieval: Large Language Models (LLMs), RAG, LangGraph, tool/function calling, embeddings, FAISS, pgvector, agent state, context management, multi-tenancy

Cloud & Containers: AWS (Lambda, ECS, EC2, S3, RDS, API Gateway, CloudWatch, CDK, CloudFormation, SageMaker), Azure App Service, Azure Functions, Kubernetes, Docker

Data & Messaging: PostgreSQL, Redis, Celery, RabbitMQ, Pandas, ETL/ELT, Airflow, event-driven architecture, query optimization

Delivery & Reliability: GitHub Actions, Argo CD, CI/CD, Pytest, SonarQube, ELK Stack, incident response, idempotency, retry and fault-tolerance patterns

Security: RBAC, JWT, OAuth2, tenant isolation, secure API design, audit logging

Applied ML & Video: Scikit-Learn, YOLO integration, FFmpeg, RTSP processing

WORK EXPERIENCE

Senior Software Engineer 03/2024 – Present

SITE (Saudi Information Technology Company) via Flint International

- Lead backend architecture for a secure correspondence platform serving Saudi government entities, defining service boundaries, API standards and reliability patterns for intra- and inter-entity communications.
- Design Django REST Framework APIs for critical workflows, with schema validation, versioning, secure authentication and standardized error handling.
- Enforce release quality through SonarQube and CI/CD checks; use Argo CD to synchronize Kubernetes deployments across environments.
- Implemented role-based access control (RBAC) across **4+ authorization tiers** with SOC 2-aligned audit logging in ELK, tracing sensitive actions and supporting production investigations.
- Build asynchronous Celery and Redis workflows for delivery tracking, alerts and reporting, with idempotency, retries and failure isolation; participate in rotational on-call under defined SLAs.
- Modernize backend services by refactoring duplicated code, optimizing database queries, updating unit tests and adding integration coverage.
- Integrated a secure Document Management System (DMS) with versioning, encryption and governed access to structured and unstructured content.

Senior Software Engineer, *Arbisoft* 10/2023 – 02/2024

- Built a serverless orchestration layer on AWS Lambda for Insurify, a US insurtech platform, dispatching quote requests concurrently across insurance carriers and removing dependence on sequential provider calls.
- Integrated SOAP-based providers with varied schemas and state-specific requirements, maintaining coverage through test-driven development with Pytest and the Django test framework.

Software Engineer, *Kavtech Solutions (Private) Ltd.* 05/2021 – 08/2023

- Migrated ingestion and processing workloads from Amazon EC2 to AWS Lambda and ECS, **reducing infrastructure costs by approximately 70%** and minimizing instance-management overhead.
- Reduced key dashboard query latency from **approximately 15 seconds to 2–3 seconds** through database indexing, query optimization and caching.
- Onboarded containerized backend and data-processing services onto Kubernetes, defining deployment configuration, secrets, service exposure, resource requests and limits, and rolling updates for repeatable releases.
- Built Python ETL/ELT pipelines and event-driven ingestion for a high-volume sports data platform, validating and transforming data for downstream Scikit-Learn prediction models.
- Developed Scrapy crawlers and API ingestion services across multiple sports data sources, later consolidating ingestion onto the SportsData.io API.

Python Developer, *Magnetar Solutions* 07/2020 – 05/2021

- Built Flask APIs and Pandas transformation pipelines for land-acquisition and property-management workflows, using RabbitMQ to decouple asynchronous processing from API requests.
- Deployed backend APIs on Azure App Service and scheduled data ingestion and normalization workloads with Azure Functions.

Junior Software Engineer, *Ebiz Ltd.* 02/2018 – 06/2020

- Built Django backend features for e-commerce and service-management platforms, including Shopify product/order synchronization and Stripe/PayPal payment integrations.
- Implemented WebSocket-based real-time functionality and optimized database queries supporting customer-facing workflows.

SELECTED PROJECTS

LLM-Powered Shopify Assistant 09/2025 – 02/2026

- Built a retrieval-augmented generation (RAG) assistant over product catalogs, FAQs and operational documentation, using LangGraph with query rewriting and intent classification to route requests between knowledge retrieval and business-action tools.
- Implemented tools for order tracking and discount generation, constraining execution through structured inputs, application-level authorization and tenant permissions.
- Migrated vector retrieval from FAISS to pgvector to support persistent storage and tenant-aware retrieval; managed multi-turn context separately from retrieval and tool execution.
- Deployed on AWS using OpenRouter for model inference, with logging of model calls, tool invocations and retrieval results for auditability and debugging.

AI CCTV Violation Detection System, *DP World* 01/2023 – 02/2024

- Deployed web services and AI-inference components as separate Kubernetes workloads, preserving fault isolation between API traffic and GPU-backed processing while RabbitMQ decoupled camera-processing flows.
- Built real-time RTSP ingestion, FFmpeg decoding and preprocessing pipelines for a production deployment spanning **120+ cameras**.
- Integrated YOLO-based PPE and zone-intrusion detection models, achieving **95%+ accuracy** on evaluated footage, with GPU-scheduled inference for camera-processing workloads.

CERTIFICATIONS

AWS Certified Developer – Associate: Amazon Web Services · October 2026

EDUCATION

Bachelor of Science: Computer Science, *Government College University (Lahore, Pakistan)*
